FOR IMMEDIATE RELEASE

**PrivatizeMe makes Effortless Privacy Protection possible.
Comprehensive Privacy Protection App for Macs puts a stop to being followed by
the web's prying eyes.**

DURHAM, NC – September 5, 2017– PrivatizeMe (www.privatizeme.com), has released the PrivatizeMe Anti-Tracking App for Macs to block unwanted tracking by cyber stalkers, hiding a user's online activity from the web's prying eyes.

Imagine "Effortless Privacy Protection" that defeats attempts by cyber stalkers to invade your online privacy without changing the way you browse. PrivatizeMe has just created such a solution with its PrivatizeMe Anti-Tracking App for Macs and Windows PCs.

Consumers are constantly being tracked by untrusted websites and their marketing partners, including data brokers who generate billions of dollars a year by stalking users and creating profiles. Users are then targeted based on their spending, searching or social media behavior by these untrusted sites and they see targeted content and can even be up-charged.

"Similar to blinds covering bedroom windows to keep voyeurs away, PrivatizeMe provides solutions to keep for your online activity private from cyber stalkers" says Ajit Pendse, CEO of PrivatizeMe, LLC.

PrivatizeMe Anti-Tracking for Macs works across all major browsers (Firefox, Chrome and Safari) on Macs and enables browsing free of trackers, cookies and cyber stalkers. PrivatizeMe protects users from being stalked, profiled, targeted by spear phishing and mal-advertisements and gives the user control over their personal data.

PrivatizeMe Anti-Tracking prevents cross domain tracking, clears cookies and trackers hidden in browser cache and databases. PrivatizeMe also has a unique Digital Fingerprint Changer to thwart non-cookie based trackers that capture the unique digital fingerprint of the user's Mac. Furthermore, PrivatizeMe Anti-Tracking allows users to select their own Trusted Sites to enable that site's personalized services including, "keep me logged in" features.

PrivatizeMe Anti-Tracking Apps for PC and Macs were featured in August in Kim Komando newsletters and on the website.

PrivatizeMe Apps for Macs and Windows/PCs are available at <https://privatizeme.com> and cost \$13.95 for a yearly license. A "lifetime" license option is also available.

ABOUT PRIVATIZEME:

PrivatizeMe has introduced a new dimension in online data security – effortless privacy protection from cyber stalkers invading your privacy. PrivatizeMe’s unique “anti-tracking and anti-profiling” containerization technology enables users to transparently keep their browsing private, free from trackers & cookies, cross domain tracking, targeted phishing/ maladvertisements, digital fingerprint capture and cyber stalking by untrusted sites.
